SUMMARY

B.Tech Computer Science (AI & ML) student at Gayatri Vidya Parishad (Class of 2027) with hands-on expertise in building production-grade AI systems. Specialized in designing agentic workflows with LangGraph, implementing RAG architectures using Pinecone and vector databases, and training deep learning models with PyTorch. Proven ability to architect end-to-end solutions—from LLM orchestration and prompt engineering to FastAPI backends and React frontends. Strong foundation in NLP, generative AI, and deploying scalable AI applications with Docker. Seeking AI/ML engineering internships to apply technical skills in real-world innovation.

ACHIEVEMENTS

Winner (1st Place) – CognitiveX GenAI Hackathon | *GVP, SmartBridge, IBM*

- Secured 1st place out of 200+ teams and 600+ participants with "Team Zero".
- Leveraged IBM Granite, Prompt Engineering, and Streamlit to build the winning solution.

Winner (1st Place) – AI Build-A-Thon | *AI for Vizag, Evolutyz Corp*

- Awarded top prize for demonstrating exceptional teamwork and product building capability under tight deadlines.

5x Hackathon Winner: Consistent high-performer in competitive coding and rapid prototyping environments.

PROJECTS

Content Strategist Agent (Blog-Gen) | *LangGraph, FastAPI, React, Docker, Pinecone*

Built multi-agent content pipeline with 12 specialized AI agents automating research-to-publication workflow

Integrated Firecrawl web scraping + Pinecone RAG for factually grounded, citation-backed content

Implemented "Reflexion Loop" for iterative quality control with human-in-the-loop approval gates

Developed real-time agent observability dashboard using Server-Sent Events streaming

Supports multi-provider LLMs (OpenAI, Anthropic, Google, Ollama) with local privacy mode

Designed modular agent architecture enabling easy addition of new specialized agents without code refactoring

Built brand voice configuration system allowing customizable tone, style, and formatting per client

Containerized entire stack with Docker Compose for one-command local and cloud deployment

[GitHub](#)

HealthRevo: AI Health Monitoring Platform | *Google Gemini, FastAPI, React, PostgreSQL*

Full-stack healthcare app with JWT role-based access for clinicians and patients

Built OCR prescription analyzer using Tesseract to detect harmful drug interactions

Engineered real-time vitals monitoring with tiered alert system (mild/serious/urgent)

Integrated Gemini 1.5 Flash chatbot providing personalized health guidance from patient data

Designed adherence tracking dashboard with React Query and Recharts visualizations

Implemented patient risk scoring algorithm analyzing vitals history for early health deterioration detection

Built secure HIPAA-aware data handling with encrypted storage and audit logging

Created clinician triage view with priority-sorted patient queue based on alert severity

EDUCATION

Gayatri Vidya Parishad College of Engineering

B.Tech in Computer Science (Specialization in AI & ML)

Visakhapatnam, India

Expected 2027

CERTIFICATIONS

Complete Data Science, Machine Learning, DL, NLP Bootcamp – Udemy

Mathematics: Basics to Advanced for Data Science and GenAI – Udemy

Machine Learning for Engineering and Science Applications – NPTEL

TECHNICAL SKILLS

Languages: Python, C++, TypeScript, SQL

AI & ML: PyTorch, Deep Learning, NLP, LangGraph, LangChain, Google Gemini API, RAG

Web Development: FastAPI, React.js, TailwindCSS, Streamlit

Developer Tools: Docker, Git/GitHub, PostgreSQL, Pinecone, Linux
